Minutes of meeting: Radiation Safety Committee, sub-committee

Date: Thursday, April 23, 1999

Present: A. Carroll, W. Christie, A. Etkin, A. Franz, W. MacKay, A. Stevens

Subj: Meeting with RSC Liaison Physicists for RHIC Detectors

This meeting consisted of a discussion of radiation safety topics at each of the IRs insofar as they are currently known. A copy of the current draft of the RSC checklist relevant to the collider region for the commissioning run was distributed to those present who will act as liaison between the collaborations and the RSC: Alan Carroll for PHOBOS, Achim Franz for PHENIX, and Bill Christie for STAR. Dana Beavis, who serves this role for BRAHMS, was not present.

When complete and approved by S. Musolino, the items on this checklist (Attachment) will be incorporated into the final checklist for the commissioning run by Waldo MacKay. In general, signoff for these items will not be the responsibility of the RSC Liaisons. However, they should be aware of all the concerns (appropriate shielding, posting, etc.), and the Liaisons will be expected to sign off on final readiness to receive beam. The items at the 6, 8, and 10 o'clock areas were briefly discussed. Achim Franz and Asher Etkin will decide on an RS LOTO procedure for the main PHENIX plug door.

The question of physicists participating in the detector region sweeps (in PHENIX and STAR only) was briefly discussed. As reported in the minutes of the full committee on 04/09/1999 the participants would act as watchers during the sweeps. The participants in this meeting agreed that one of these watchers should be the shift leaders.
